Pending I-9 and Work Permit (work authorization) Expiration

How to Run the Analysis Report
May 2019
Pending I-9 Report

- This new report will help you identify employees who:
  - are on Pending I-9 status
  - whose work authorization is going to expire within 120 days
  - whose work authorization has expired
  - whose work authorization expiration date is missing
Pending I-9 Report

- Select your criteria. There are several options. You must click the > button to move your selection into the prompts.

- You must at least enter Personnel Area. If you choose to enter only Org Unit you will get an error. This is confusing because the prompt screen tells you Personnel Area is optional; it is not.

- Key date is not an option; this report is always as of close of business yesterday.

The screen suggests PA is optional; it is actually required. You will get no results without it.

Type your selection here and... press the right arrow to move it into the report. If you need to remove it and add something else use the left arrow.
Pending I-9 Report

If you need to change your prompts they are in this menu...

and you click Advanced to open the dialogue box.

Refresh Values will show you a list of your choices.

Remember to use the arrows to move your criteria in and out of the report as needed.
Pernrs with future start dates appear without names.

As the employee reaches the start date the master data will fill in the name.
# Work Authorization Process for Non-Residents
